

EstimatorXpress SIP's & ICF Bonus Pack

As part of our commitment to continuous product development we spend a lot of time and resource in updating our software with the very latest technologies and building techniques. Our resident Quantity Surveyor has been working hard and due to popular demand, we're now pleased to launch the SIPs & ICF Bonus Pack for EstimatorXpress, which allows you to price up Structural Insulated Panels as well as Insulated Concrete Formwork.

ICF's

We've introduced 4 comprehensive new estimating calculators (or Workbooks as we call them) for ICF Walls, including the ICF blocks themselves, steel reinforcement, ICF wall bracing system and the supply and pour of concrete to the ICF core plus internal décor as required, including the labour and plant. We've 4 types of ICF finishes;

1. ICF Walls with external render
2. ICF Walls with external brickwork leaf
3. ICF Walls with brick slips
4. ICF Walls with timber cladding

SIP's

We've also introduced a new SIP's Workbook which works in conjunction with a new SIP's Specification to calculate the cost of SIP's walls and roofs, including the Glulam ridge beam and purlins as well as an allowance for fixing and battening for services etc.

Use the SIP's Workbook and Specification with your existing EstimatorXpress Wall Workbooks and it will omit the innerleaf and replace it with SIP's panels instead (in the same way as Timber Frames).

Just £50 ex VAT
