factsheet

Health & Safety Xpert – software overview

Product Summary

All building firms, no matter how small, have a duty of care to their employees and the general public. As far as reasonably possible, they must safe guard the health, safety and welfare of all on site. That’s the law! It’s essential therefore that students looking to go into the construction industry know how to produce the paperwork required to facilitate good health and safety practice on site.

Health & Safety Xpert is suitable for builders, developers, architects and contractors. With Health & Safety Xpert the user doesn’t need to be a health and safety expert themselves and requires very little input from the user.

The new project wizard guides the user through creating all the required health and safety paperwork as the built in knowledge base determines the likely tasks and risks involved on site and generates all the necessary paperwork for the building project.

Plus, when combined with EstimatorXpress the user can simply import their estimate straight into Health & Safety Xpert to automatically produce all the project specific paperwork required ready for review and printing.

Health & Safety Xpert – Supporting Further Education Courses

All Health & Safety Xpert’s documentation has been developed in partnership with leading industry health and safety professionals for the small-medium sized builder, developer or contractor.

HBXL’s Health and Safety Xpert provides an easy to use platform for student to research and build their knowledge quickly and effectively and to create comprehensive documentation thereby allowing them to focus on the Health and Safety issues themselves rather than the production of documentation.

Simply tell Health & Safety Xpert what kind of project you are undertaking and it does the rest producing a comprehensive Company Health & Safety Policy, pre-populated Risk Assessments and COSHH Assessments, in addition to Construction Phase Health & Safety Plan for every job you undertake.

Health & Safety Xpert will help you produce the following documents:

- Health & Safety Policy
- Pre-construction Information Packs
- Construction Phase Health and Safety Plans
- Risk Assessments
- Client Acknowledgement of Risk Assessment
- COSHH Assessments
- COSHH Coversheet
- Noise Assessments
- Accident & Incident Record
